7. For locations of installations observed on the Burgas-Pomorie Road, see Appendix "A".

Military and Naval Installations on the Pomorie-Stalin Road

- 8. No coastal installations were observed between Pomorie and Nesebur (Nh239, E27hh); the area is practically deserted and uninhabited. The port of Nesebur has two jettles which appear to be of recent construction, but the port itself seems of little value except for small fishing vessels. On the hill behind the town are two small naval barracks which appear to be deserted. A small official-looking, new building is located on the quay in the center of the port. Two new ZISS automobiles were parked in front of the building.
- 9. The coastal area between Nesebur and Obzor (N42-48, E27-52) is nearly abandoned with the exception of a few fishermen's huts. The road is in good condition, of recent construction and covered with fine sand. In Obzor, some effort has been made to attract tourists. A board walk has been built along the beach. Five or six hundred meters behind the beach are two recently built barracks which are un-occupied, but may be destined as "rest homes". No troops were observed in the area.
- 10. Between Staro-Oryakhovo (Nh259, E27h8) and Novo-Oryakhovo (Nh259, E2751), three military trucks were observed on the road. Two carried tank corps insignia and the third carried infantry markings. One oil well was observed along the side of the road.
- 11. For locations of installations observed along the Pomorie-Stalin Road, see Appendix $^{18}\mathrm{B}^{19}$.
